DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on April 21, 2006 has been entered.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 1. Claims 1-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Raasch (US 6,690,776 B1) in view of Takagi et al. (US 6,426,946 B1, hereinafter "Takagi").

Raasch discloses a device comprising:

a telephone port (connection 106 to telephone network 108; Figure 1); and

a processor (server modems are associated with an Internet service provider; col. 3, lines 59-60) adapted to:

one or more telephone lines (a first server modem 102 establishes connection with a first client modem 104 over analog local loop 112, and a second server modem 102 establishes connection with a second client modem 104 over another analog local loop 110; Figure 1; col. 6, lines 5-10);

exchange data over the modem connection (see Figure 3);

place the modem connection on hold (central site DPCM modem 350 transmits a modem hold 356; col. 10, lines 53-65; col. 11, lines 14-18);

prevent the hold session from exceeding an individualized hold timeout time limit (a hold-time parameter (357) is either set by the central site DPCM modem 350, the APCM modem, or negotiated at the initial training or at any other time after a communication session has been established; col. 10, lines 59-65; col. 13, lines 12-19).

Raasch differs from claims 1-23 in that it does not teach the use of a user profile when determining the hold timeout limit. However, Takagi teaches the desirability of storing individualized modem parameters and using these stored parameters in subsequent communications based on the telephone number of the opposite modem in order to eliminate the time needed for communication handshaking (Abstract; Figures 7 and 11; col. 2, line 62 – col. 3, line 5). It would have been obvious to an artisan of ordinary skill to incorporate such storage of modem parameters within a user profile, as taught

by Takagi, within the device of Raasch in order to reduce the time needed to determine the individualized hold timeout limit.

Regarding claim 5, Olafsson teaches receives caller ID information as part of the screening process (Abstract).

Regarding claims 6, 12, 15, 23, in Raasch, the modem on-hold connection is terminated when the time limit has expired (col. 15, lines 31-43).

Regarding claim 13, in Raasch, a non-modem communication can be established (handset 287 is connected for voice communication; col. 8, lines 56-65; col. 11, lines 26-29).

Response to Arguments

2. Applicant's arguments with respect to claims 1-23 have been considered but are most in view of the new grounds of rejection.

Conclusion

- 3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Bellenger et al. show use of stored modem parameters to reduce the initial setup time.
- 4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Stella L. Woo whose telephone number is (571) 272-7512. The examiner can normally be reached on Monday-Friday, 8:00 a.m. to 4:30 p.m..

Art Unit: 2614

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Curtis Kuntz can be reached on (571) 272-7499. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
